

Burns in the TFC phase

80%TBS	750ml/hr	1000ml/h
50%TBSA	500ml/hr	750ml/hr
20%TBSA		
	50Kg	75Kg
		100Kg

After moving into a prolonged casualty care situation move from the above table and use rule of 10's as below.

Rule of 10's

- TBSA x 10 = Initial fluid rate ml/h
 - Example: 20%burns x 10 = 200ml/hr
- Add 100ml/h for every 10kg of body weight over 80kg (round up to the nearest 10 e.g. 85kg = 90kg)

Rule of 10s quick guide example

*This is best estimate of patient's weight

%TBSA	Up to 80kg	Up to 90kg	Up to 100kg	Up to 110kg	Up to 120kg
20%	200mL/h	300mL/h	400mL/h	500mL/h	600mL/h
30%	300mL/h	400mL/h	500mL/h	600mL/h	700mL/h
40%	400mL/h	500mL/h	600mL/h	700mL/h	800mL/h
50%	500mL/h	600mL/h	700mL/h	800mL/h	900mL/h
60%	600mL/h	700mL/h	800mL/h	900mL/h	1000mL/h

Wallace rules of 9's
